DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-18, drawn to a probe, a method of genotyping the MHC expression pattern of a chicken, and a method of determining chickens that are resistant to disease using the method of genotyping the MHC expression pattern of a chicken, classified in class 536, subclass 24.31, et al.
 - II. Claims 19 and 20, drawn to a method of breeding chickens, classified in class 800, subclass 21.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination (Group II) does not require the particulars of the subcombination (Group I) because breeding chickens to produce offspring which are resistant to a preselected disease can be performed by observing the phenotype of the chicken or by observing the breed of chicken and does not require knowledge of the MHC genotype of the chicken. The method of Group I

Application/Control Number: 09/870521

Art Unit: 1632

has separate utility because determining the MHC haplotype of a chicken can be used for the purpose of transplantation.

If applicants elect Group II, the phrase "selecting a first chicken of a first gender according to the method of claim 18" will only be considered as it relates to "selecting a chicken which is resistant to a preselected disease." The phrase "selecting a first chicken of a first gender according to the method of claim 18" will not be examined as it relates to the method steps of claim 18 which are patentably distinct for the reasons cited above.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II because it does not limit the chickens to one particular genotype, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
